Preface

<i>M. Horňák and S. Jendrol'</i>	1
----------------------------------	---

Contributions

<i>A.J. Berger</i> Minimal reducible bounds in the lattice of additive hereditary graph properties	3
<i>A.J. Berger, I. Broere, S.J.T. Moagi and P. Mihók</i> Meet- and join-irreducibility of additive hereditary properties of graphs	11
<i>M. Borowiecki and E. Sidorowicz</i> Some extremal problems of graphs with local constraints	19
<i>S. Brandt</i> A 4-colour problem for dense triangle-free graphs	33
<i>H.J. Broersma</i> On some intriguing problems in hamiltonian graph theory—a survey	47
<i>J. Brousek</i> Forbidden triples for hamiltonicity	71
<i>J. Brousek, R.J. Faudree and Z. Ryjáček</i> A note on hamiltonicity of generalized net-free graphs of large diameter	77
<i>I. Gorgol and T. Łuczak</i> On induced Ramsey numbers	87
<i>F. Göring</i> On 2-regular subgraphs in polyhedral graphs	97
<i>E. Hexel</i> On light graphs in the family of 4-connected planar graphs	103
<i>M. Klešč</i> The crossing number of $K_{2,3} \times C_3$	109
<i>M. Kouider and A. Marczyk</i> On pancyclism in hamiltonian graphs	119

<i>M. Klešč</i> The crossing number of $K_{2,3} \times C_3$	109
<i>M. Kouider and A. Marczyk</i> On pancyclism in hamiltonian graphs	119

<i>A. Pruchnewski</i>	
On the domination number of a graph	129
<i>B. Randerath, I. Schiermeyer and M. Tewes</i>	
Three-colourability and forbidden subgraphs. II: polynomial algorithms	137
<i>A. Recski</i>	
Two matroidal families on the edge set of a graph	155
<i>Z. Skupień</i>	
Hamiltonicity of planar cubic multigraphs	163
<i>Z. Tuza and M. Voigt</i>	
A note on planar 5-list colouring: non-extendability at distance 4	169
<i>M. Woźniak</i>	
On cyclically embeddable $(n, n-1)$ -graphs	173
Author index to volume 251	181

the 'information' and 'communication' fields. The 'information' field is defined as:

...the study of the processes of information production, distribution, access, use and evaluation, and the social, cultural and economic contexts in which these processes take place.

The 'communication' field is defined as:

...the study of the processes of communication production, distribution, access, use and evaluation, and the social, cultural and economic contexts in which these processes take place.

These definitions are very broad and cover a wide range of topics. However, they do provide a clear distinction between the two fields. The 'information' field is concerned with the processes of information production, distribution, access, use and evaluation, while the 'communication' field is concerned with the processes of communication production, distribution, access, use and evaluation.

The 'information' field is also concerned with the social, cultural and economic contexts in which these processes take place. This is because information is a social product and its production, distribution, access, use and evaluation are all influenced by the social, cultural and economic context in which it takes place.

The 'communication' field is also concerned with the social, cultural and economic contexts in which these processes take place. This is because communication is a social process and its production, distribution, access, use and evaluation are all influenced by the social, cultural and economic context in which it takes place.
